

Motion Theme:

ECONOMICS

MOTION 1

This House opposes the pursuit of
'unicorn' status in startups.

CONTEXT SLIDE:

In the context of startups, the term 'unicorn' refers to prestigious startups that are valued at over \$1 billion.

MOTION 2

This house believes that societies should
aspire to drastically reduce working
hours rather than integrate and
optimize human labor

CONTEXT SLIDE:

In 1930, economist John Maynard Keynes predicted that advances in productivity would eventually allow humans to work as little as 15 hours per week. Nearly a century later, despite major technological progress and the emergence of artificial intelligence, average working hours in many countries remain largely unchanged. With the growing capability of AI to perform complex cognitive and physical tasks, societies now face a choice: to use these advancements to reduce the human burden of labor — potentially restructuring economic life around leisure and non-work pursuits — or to further integrate humans into increasingly efficient, data-optimized systems of work.

MOTION 3

This house prefers a world in which
wealthy individuals with guaranteed
financial security do not seek
employment
